About The Assignment

Create a sample application using the provided APIs and screens. The application will contain a list of categories when clicking on one of them we will get a list of videos related to that category. Just display the list of video with pagination.
We expect a zip file contains the project with its git files (remove the build files).

Evaluation Criteria

- Application structure and architecture
- Code quality
- Git history quality
- Overall output performance and stability

Out of Scope

There is no need to implement video playing functionality or the tab bar in the bottom. Search functionality is an optional.
